

Printing Issue with Tytron 2.2 effective 06/15/2023

Microsoft released an update in April 2023 and just now people are receiving it. Their update has a known driver “glitch” that we found out affects the Tytron 2.2 software. Since we are no longer doing updates with 2.2 we can’t fix the problem, but we did find a loophole that will work.

Go to your computer’s **Control Panel**. It’s easiest if it’s set to **View by: Large icons** *see image below
Right click on **Devices and Printers** and select open in new window.

The Devices and Printers window will pop up and allow you to see your printers.
You need to right click on the **Microsoft Print to PDF** image and select **Set as default printer**

Next, print from the Tytron 2.2 software. It now shows up in your print preview as print to pdf. Now you can manually change it to your printer. Selecting the printer in the print preview will have to be done each time.

The Titronics Cloud software does not have this problem and is available now. Call into the office to ask for more information on updating to the Titronics Cloud software.
